

# Wordpress VM Instructions

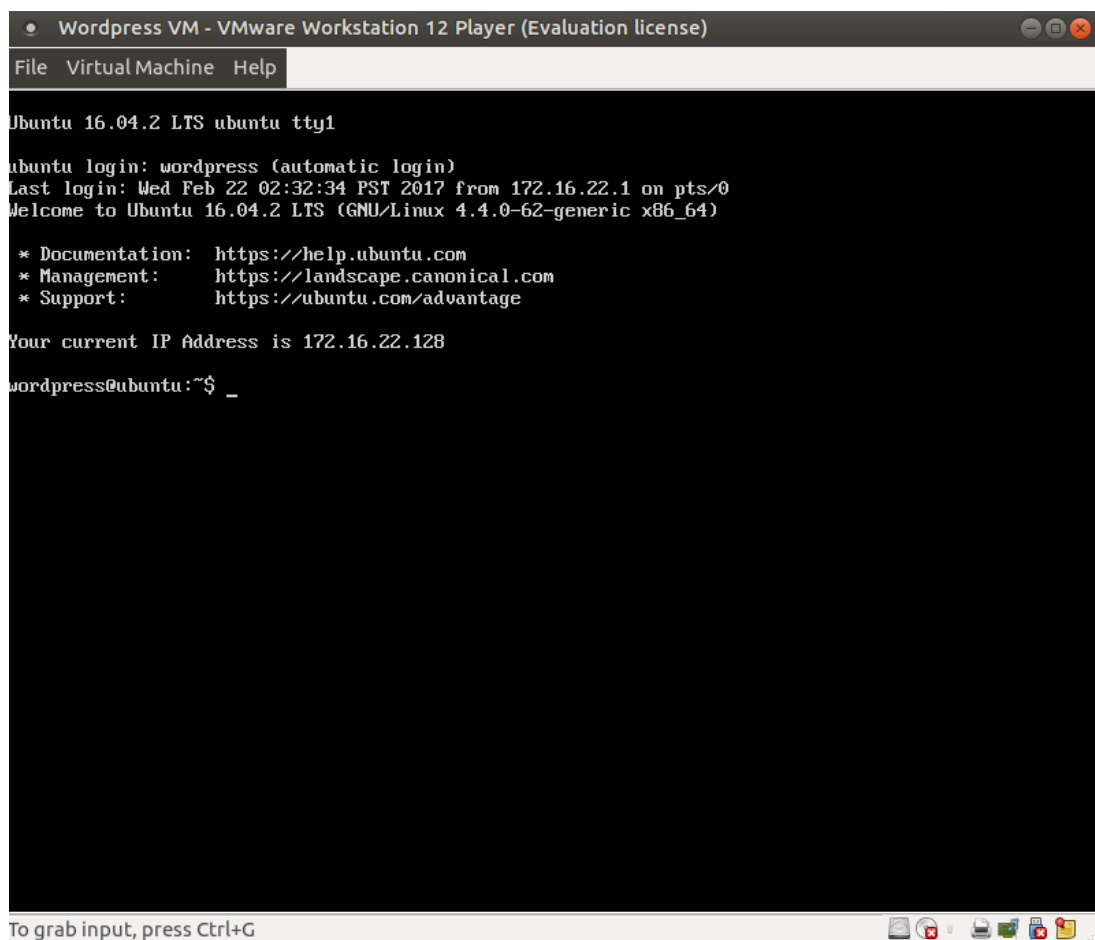

## Installation

1. You will need to install VMWare Player on your Windows PC. You can download this from: <http://www.vmware.com/go/downloadplayer>
2. Extract the AQIWordpressVM.zip to a directory on your Windows PC.
3. Start VMWare Player and open the VM in the same location to which you extracted the exe in step 2

## Startup

The VM will take a while to start eventually you should see something similar to below, including the reference to your **current IP address**.

This is the IP address of the running VM and you need to take note of it because that is what you will use for ssh, windows network (samba) and in your browser.

```
Wordpress VM - VMware Workstation 12 Player (Evaluation license)
File Virtual Machine Help

Ubuntu 16.04.2 LTS ubuntu tty1

ubuntu login: wordpress (automatic login)
Last login: Wed Feb 22 02:32:34 PST 2017 from 172.16.22.1 on pts/0
Welcome to Ubuntu 16.04.2 LTS (GNU/Linux 4.4.0-62-generic x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:    https://landscape.canonical.com
 * Support:       https://ubuntu.com/advantage

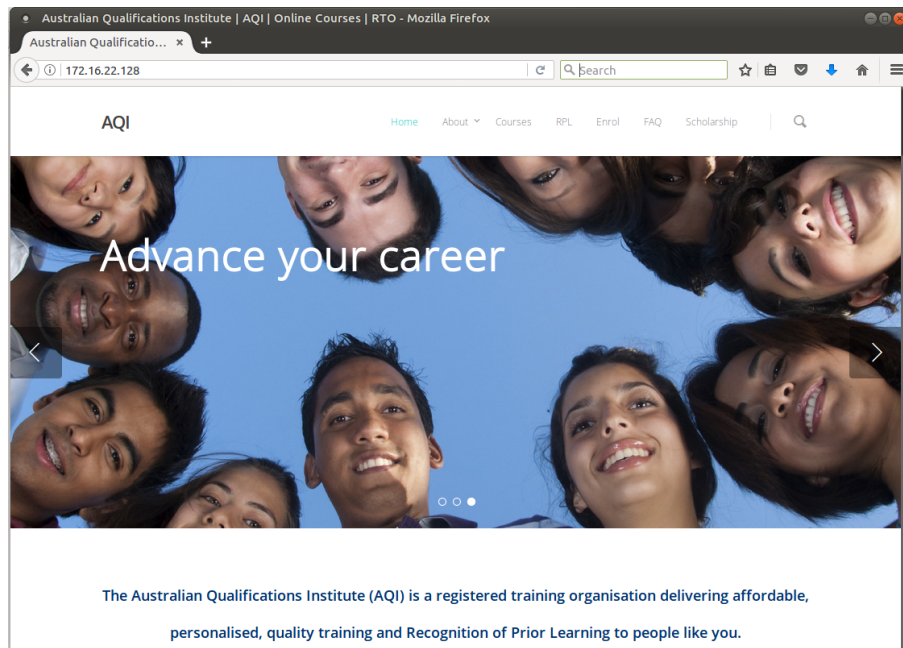

Your current IP Address is 172.16.22.128

wordpress@ubuntu:~$ _

To grab input, press Ctrl+G
```

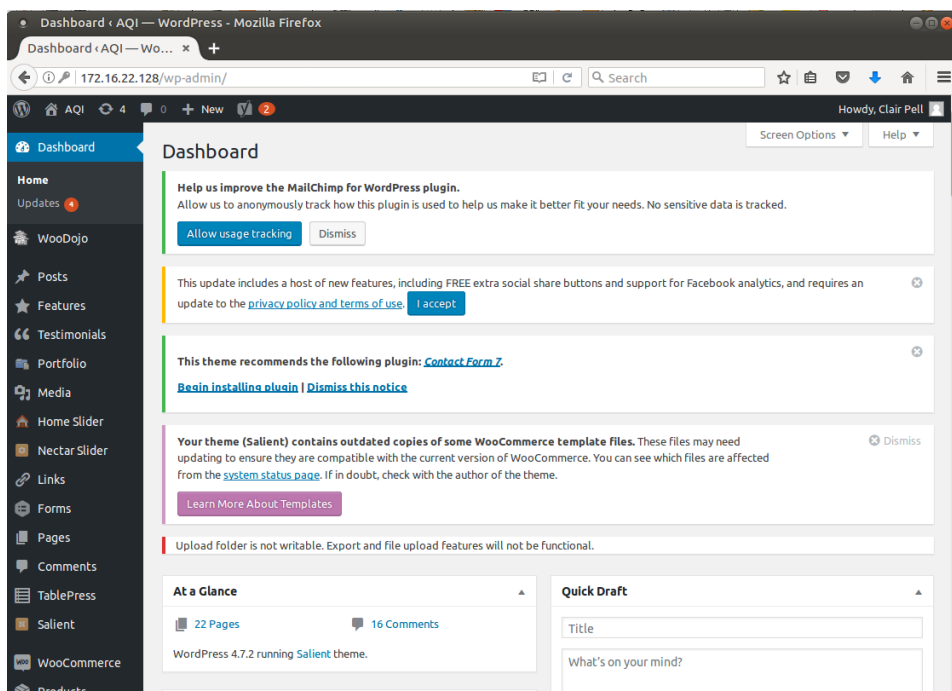

## The Web Site

You access the website using the URL from the VM Ware Console in the previous step.

## Wordpress Administration

You can access the wordpress administration section via the VM Ip address and /wp-admin. The admin user is 'Webadmin-clair' and the password is 'password'

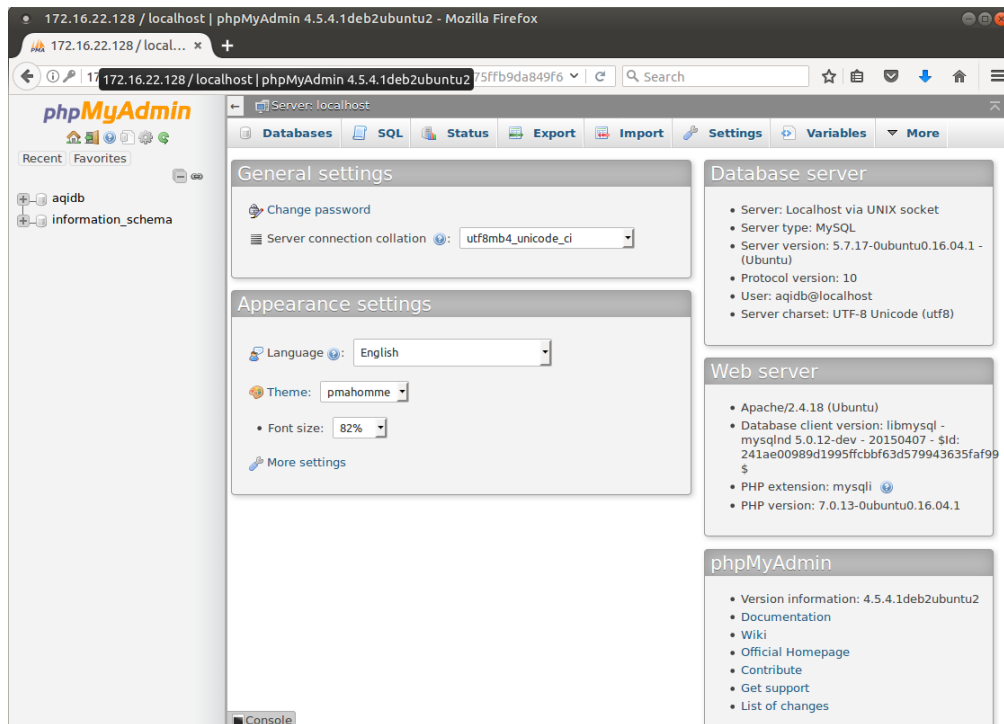

# PHPMyadmin

Although not recommended, you can directly manipulate the aqidb using phpmyadmin

It is accessed using the VM IP address and /phpmyadmin.

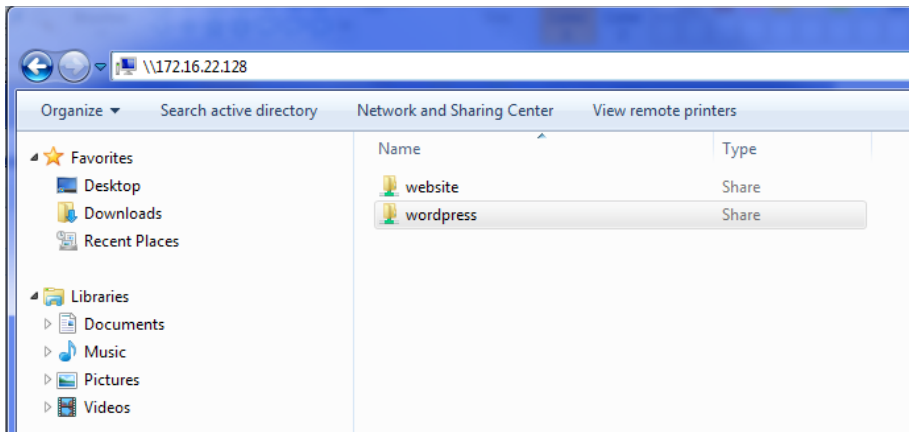

The username is 'aqidb', the password is 'password'

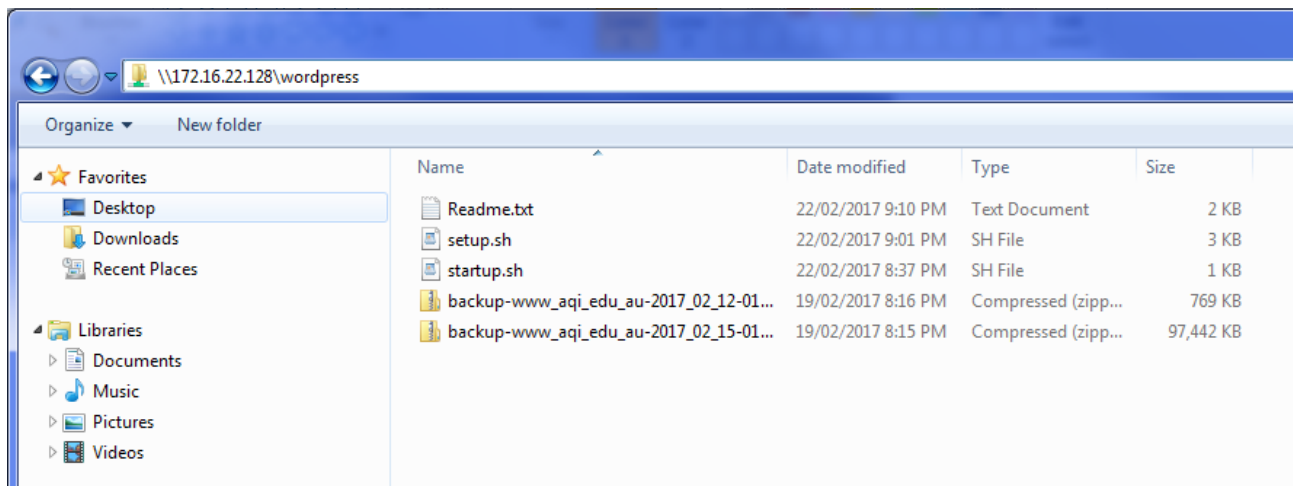

# Refresh Wordpress with AQI Backups

To update the VM to a later version of the AQI site you will need to use Windows Explorer (samba) and ssh

You can access the wordpress home directory and the website directory via Windows Explorer using the \\VM IP Address in the location bar of Windows Explorer.

To refresh the wordpress database and website in the VM, you need to copy the two backup files to the /home/wordpress directory (The 'wordpress' share in windows explorer)

And then run the  
./setup.sh script from  
the VM Ware  
Console.

Your current IP Address is 172.16.22.128

```
wordpress@ubuntu:~$ ./setup.sh
mysql: [Warning] Using a password on the command line interface can be insecure.
